

Satellite radio is such a major improvement over the monopolist commercial radio and its standardized formats. Commercial radio represents much of the worst of America.

Satellite radio customers pay for the programming and can do away with the incessant and blaring advertisements. IT is actually possible to enjoy radio, something not possible since the conglomerates acquired and destroyed any diversity on the commercial stations.

It is outrageous to allow the commercial broadcasters to block satellite broadcast of traffic reports. Satellite radio is providing badly needed competition. Of course the commercial broadcasters have bags of cash and lobbyist to buy the politicians.

Do something in the public interest for once.
